

“Of all the Web content-filtering solutions I’ve ever evaluated, this could be the easiest to install and configure with easy to understand reports. Any small to medium business would do well to choose Websense Express.”

Matthew Sarrel
Contributing Editor
PC Magazine

Websense Express helps improve employee productivity and protects organisations from Web-based threats.

Websense® Express

Unmanaged Internet access presents many challenges to organisations that rely on the Web for day-to-day business. Even seemingly harmless Internet use opens the door to productivity loss and threat exposure. While large organisations may have access to expensive, sophisticated security solutions, smaller organisations may not have the budgets or staffing required to protect against these threats.

Websense® Express delivers the industry’s most respected content filtering and Internet security solution optimised for mid-sized and smaller organisations. Simple and affordable, it protects against the dangers of unmanaged Internet access.

How Is Websense Express Different?

Websense Express is engineered to meet the needs of small to mid-sized organisations who require a content filtering and Web security solution that works out-of-the-box, requires no specialised training, and delivers real value quickly. Websense Express delivers enterprise-level functionality, optimised for the needs of mid-sized and smaller organisations.

Simple

- Combines content filtering and Web security into one solution that improves employee productivity and protects against complex Internet threats.
- Fully-integrated system platform provides one-box management and reporting in a single server.
- Intuitive real-time monitoring shows Internet usage and system status on one dashboard screen.

Affordable

- Begins working immediately, often paying for itself within 30 days with productivity improvements alone.
- Eliminates layers of IT security technology that are ill-designed to address the productivity and Web security needs of mid-sized and smaller organisations.
- Reduces added expenditures by leveraging your existing Windows® investment and expertise.

Fast

- Provides immediate protection against productivity and bandwidth draining Internet use and Web-based threats.
- Easy installation and out-of-box defaults mean the software is set-up within 30 minutes.
- “Getting Started” tutorial helps administrators create customised policies quickly.

Easy

- Always up-to-date through automatic daily database updates; requires little maintenance or updating.
- Web-based reporting and context-sensitive drill down capabilities for easy and effective analysis of employee Internet use.
- Integrates with Active Directory and NT domains for easy policy creation and organisational reporting.

Beyond Simple, Affordable, Fast, and Easy

Websense Express enables mid-sized and smaller organisations to efficiently and effectively protect their users from productivity and Internet security risks by proactively blocking access to inappropriate content and security threats before they have a chance to infect their systems. Websense Express helps organisations create a safe computing environment, enabling employees to productively use the Internet without exposure to risks which are typically missed or too costly to prevent using traditional security technologies such as antivirus and intrusion prevention systems.

System requirements

- Microsoft® Windows Server® 2003 (SP1-R2)
- Intel Dual-Core Xeon
- 2 GB RAM
- 160 GB HDD
- Available as software (worldwide) or an appliance (North America only). Consult your Websense reseller for details.

Summary

The Internet is an invaluable business tool, however unmanaged access can have undesirable consequences, including unproductive employee work habits, unnecessary bandwidth consumption, and inadvertent or malicious infection of desktops.

Benefits

Delivers “Instant Value”

- Within minutes of installation, management has visibility into how the organisation is performing, the level of Internet activity, and where risks exist – such as security threats and bandwidth usage.

Optimises User Productivity and IT Resources

- Ensures employees work in an environment that is conducive for business.
- Increases employee productivity and reduces IT staff diversions by proactively managing Internet use and its associated risks.

Features

Real-time URL and Protocol Monitors

- Builds easy-to-understand charts and graphs in real-time, right in the management console so problems can be seen immediately.

Integrated System Platform

- Provides a single server solution that supports centralised management and analysis of Internet use.
- Through a single-pass installation, all the necessary third-party software components are provided and configured to work with no additional effort.

Industry-leading Web Filtering Capabilities

- Includes the industry’s leading Web filtering technology, the most comprehensive and accurate on the market, allowing organisations to manage productivity, reduce their risk of legal liability, and improve bandwidth use.

Proactive Protection from Internet Threats

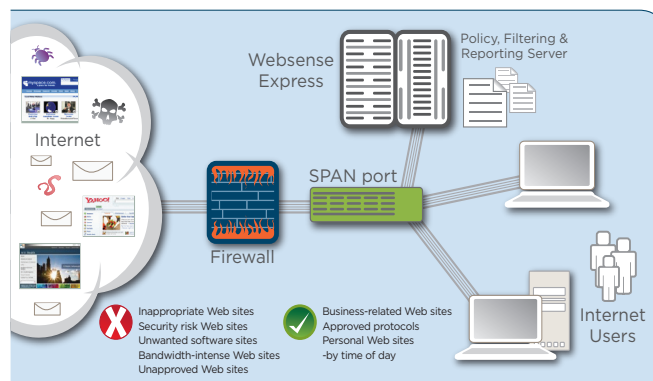

- Identifies security threats, such as malicious websites, protocols, applications, and HTTP traffic – including spyware, drive-by spyware, bots, malware, phishing, pharming, and keylogging – and blocks this traffic before it enters the network.

Protocol and Bandwidth Management

- Enables organisations to manage popular protocols including Instant Messaging, Peer-to-Peer, and other security-related protocols, to optimise network bandwidth and prevent the misuse of communication channels.

Powered by Websense ThreatSeeker Network

Websense ThreatSeeker™ Network delivers preemptive protection from Web-based security threats. Websense ThreatSeeker Technology uses more than 100 proprietary processes and systems to decipher emerging and complex threats and uses a combination of mathematical algorithms, behavior profiling, code analysis, as well as an extensive network of data mining machines. The foundation of all Websense security software products, Websense ThreatSeeker Network provides ongoing threat intelligence and delivers automatic protection to customers.
