

WEBSense WEB SECURITY SUITE

WebSense® Web Security Suite™ is a leading internet security solution that protects organizations from known and new web-based threats. WebSense Web Security Suite protects against spyware, malicious mobile code (MMC), phishing attacks, bots, and other threats. Unlike some other solutions, it also blocks spyware and keylogger backchannel communications from ever reaching their host servers.

WebSense Web Security Suite blocks threats before they reach the endpoint, and also:

- Decreases organizations' threat exposure time.
- Manages instant messaging (IM) and IM attachments.
- Helps organizations protect their websites, brands, and web servers.
- Includes industry-leading web filtering capabilities.
- Dynamically manages network bandwidth requests.
- Includes industry-leading reporting tools.
- Allows organizations to reduce the burden on IT and increase areas' visibility into their own security risks.
- Provides content-aware web reputation to flexibly manage sites that are questionable.

WebSense Web Security Suite: Powered by Innovative WebSense ThreatSeeker™ Technology

WebSense ThreatSeeker technology delivers preemptive protection from web-based security threats—threats typically missed or too costly to prevent using traditional security technologies. Unlike these approaches, WebSense seeks out threats on the internet before customers are compromised and protects customers before patches and signatures are created.

WebSense ThreatSeeker uses more than 100 proprietary processes and systems to decipher emerging and complex threats and runs using a combination of mathematical algorithms, behavior profiling, code analysis, web reputation, as well as an extensive network of data mining machines. The foundation of all WebSense security software products, WebSense ThreatSeeker provides ongoing threat intelligence and delivers automatic protection to customers within minutes.

Proactive Protection from Internet Threats

- **Blocks known threats before they reach the endpoint** – WebSense Web Security Suite identifies security threats, such as malicious websites, protocols, applications, and HTTP traffic (on Port 80 and all other ports) and blocks their access at the internet gateway.
- **Decreases threat exposure time** – Real-time security updates, delivered by WebSense ThreatSeeker technology, are available within minutes of the discovery of a new high-risk threat and require no administrative intervention.
- **Manages IM and IM attachments** – WebSense Web Security Suite fills the security and compliance gap inherent in IM communications, which presents significant risks for intellectual property theft and malicious attacks.

- **Provides content-aware web reputation** – Allows customers to use the Websense ThreatSeeker technology's content-aware web reputation capabilities to flexibly manage websites with high potential to become a security threat. This easy to use extended protection is built upon years of experience in web reputation based on both website content and a proprietary combination of attributes.
- **Helps organizations protect their websites, brands, and web servers** – Only Websense Web Security Suite includes the Websense Web Protection Services™. Websense mines the organizations' websites and watches their brands and associated URLs as part of its daily activities. If a site is infected with MMC or the name and URL being used in phishing, fraudulent, or other malicious attacks, Websense notifies the organization with attack details so immediate action can be taken. Websense also performs regular web server scans for a "hacker's-eye view" of server vulnerabilities and potential threats. Reports of risk levels and recommended actions are provided through a web-based portal, allowing organizations to take corrective action.

Industry-Leading Web Filtering Capabilities

Websense Web Security Suite includes the industry's leading web filtering technology. This technology, the most comprehensive and accurate on the market, allows organizations to manage productivity, reduce their risk of legal liability, and improve bandwidth use.

Easy Bandwidth Management

Websense Web Security Suite enables organizations to optimize their network bandwidth by prioritizing and managing traffic in real time based on pre-set thresholds and without requiring administrative intervention.

Industry-Leading Reporting Tools

Websense Web Security Suite provides the most advanced capabilities for identifying organizational security, productivity, legal liability, and network bandwidth consumption risks.

- Get immediate, in-depth analysis, exception tracking, and trending capabilities throughout the organization with real-time monitoring and powerful drill-down features.

- Distribute reporting permissions throughout the organization to provide areas with increased visibility into their own activities and to reduce the overall burden on IT.
- Run pre-defined and custom reports at pre-set intervals or on an ad-hoc basis.
- Distribute reports automatically via email.
- Export reports to a variety of formats.

Reduced IT Burden

Websense Web Security Suite allows organizations to distribute administrative tasks across departments, groups, or locations. Individual administrators can then customize policies to meet their area's needs and can assume responsibility for their users.

The Websense Web Security Ecosystem™

The Websense Web Security Ecosystem is a comprehensive framework of technology integrations that provides enhanced security and ease of deployment of Websense web security solutions in enterprise environments. The Websense Web Security Ecosystem incorporates world-class security and networking technologies including: internet gateways, network access control, security event management, identity management, and appliance platforms. Through seamless integration with more than 40 different technology solutions, the Websense Web Security Ecosystem helps organizations identify and mitigate web-based threats and vulnerabilities.

System Requirements

- Microsoft® Windows Server® 2003 Standard or Enterprise Editions, or the same with SP1
- Microsoft Windows® 2000 with SP3 or higher
- Red Hat® Enterprise Linux® 3 or 4: AS, ES, or WS, or Red Hat Linux 9
- Sun® Solaris™ 9 or 10

Summary

Today's computing environment demands a multi-layered, multi-dimensional security strategy. Websense Web Security Suite is a critical layer of that strategy, filling the gaps left by traditional defenses and blocking security threats before they reach the endpoint or extend throughout the network.
