

WEBSense® EMAIL SECURITY GATEWAY ANYWHERE

Challenge

Today's email threat landscape is dominated by converged email and Web attacks with over 89 percent of unwanted email now containing an embedded URL. Organizations are also facing increasing risks associated with loss of data and violations of acceptable email use. And while email threats are becoming increasingly complex, managing email security doesn't have to be.

Solution

Traditional security products don't have what it takes to protect today's dynamic email. That's exactly why Websense completely reinvented email security with Websense Email Security Gateway Anywhere. No other email security product offers:

- **Enterprise-class DLP** to accurately detect confidential data loss
- **Superior Malware Protection** that protects against blended threats
- **Maximum performance and resiliency** by leveraging the power of the cloud with the control of an appliance
- **Unified management** of email, Web, and data security across on-premise and SaaS platforms

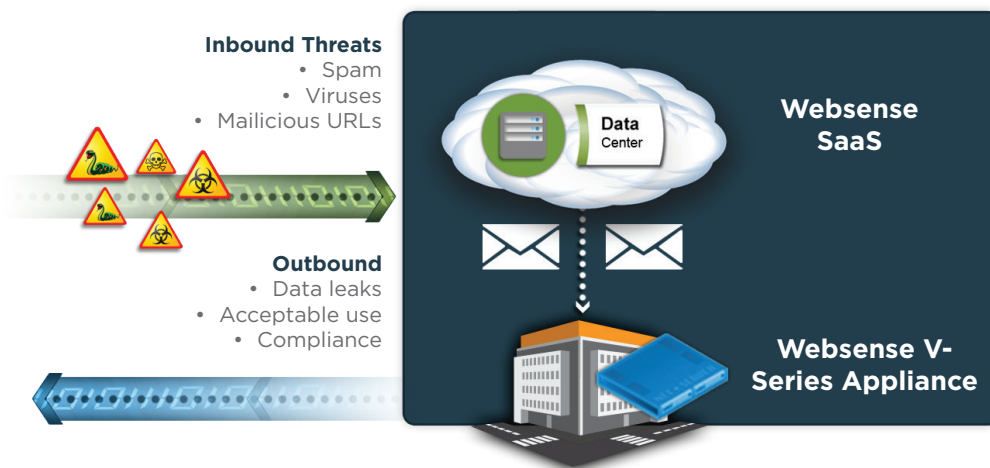

Figure A. Websense TruHybrid™ integrates on-premise and in-the-cloud deployment into one powerful solution that safeguards incoming and outgoing email

Unique Features

WebSense TruEmail DLP™ Capability

Embeds thousands of pre-defined data classifiers, global compliance policy templates, natural language processing, data fingerprinting and other market-leading, enterprise-class DLP capabilities

WebSense Advanced Classification Engine (ACE)

Combines traditional security technologies, including antispam, antivirus, reputation analysis, URL filtering with advanced technology like real-time code scanning, real-time content classification, and data fingerprinting in a unified security engine

WebSense TruHybrid™ Deployment

Leverages SaaS efficiencies for more intensive inbound email filtering, while preserving on-premise controls for policy management, reporting, and enforcement of outbound DLP

WebSense TRITON™ Console

Enables management of all policies, workflows, and reporting of email, Web, and data security from a single location

Feature	Benefits
Websense Advanced Classification Engine	Combines advanced security analytics to protect against converged email and Web threats, while detecting viruses, phishing, spyware, spam with very low false positives—all backed by a service level agreement.
Websense TruEmail DLP	Highly accurate, built-in enterprise-class DLP prevents outbound data loss and establishes required compliance controls. Lowers TCO by avoiding complex 3rd party product integrations.
Websense TruHybrid	Combines the scalability of SaaS with the control of on-premise appliance.
Websense TRITON Console	Reduces TCO and vendor management costs through unified management of Web, data and email security solutions.
Websense V-Series™ appliance	Consolidate Websense Email Security Gateway Anywhere, Websense Web Security Gateway, and enterprise DLP enforcement on a single appliance.
TLS Encryption	Server-to-server encryption using industry standard transport layer security (TLS) to protect sensitive and regulated data with secure email communications.
Websense Advanced Email Encryption*	End-user to end-user encryption using Identity-Based Encryption (IBE) that offers policy-based encryption with seamless key management using the recipient's email address as the public key.
Websense Image Analysis*	Advanced algorithms analyze images embedded or attached in emails in real-time for inappropriate content such as pornography.
Websense Email Archive Solutions*	Fully managed, web-based service to simplify mailbox and storage management and accelerate e-discovery by easily searching and retrieving messages.
Roles-based Administration	Separate access controls for quarantine management, viewing reports, and other key functions allow for delegated administration.
Quarantine Management	Powerful message search engine provides complete visibility and access to quarantined messages and logs.
Reporting	Multiple reports types with summary and detailed drill-down forensics provide 360-degree visibility into threat types and volumes, messages processed, policy violations, and more.
